

## Sample Document

This is a sample markdown document to demonstrate the PDF and DOCX support in RAG-lite TS.

### Features

- **PDF Support:** Extract text from PDF files
- **DOCX Support:** Extract text from Word documents
- **Markdown Support:** Process markdown files like this one
- **Text Files:** Handle plain text files
- **MDX Support:** Process MDX files with embedded components

### Getting Started

1. Add your PDF and DOCX files to the example-docs directory
2. Run the example script
3. Search through your documents using semantic search

### Sample Content

This document contains sample content that can be searched. You can search for terms like “PDF support”, “document processing”, or “semantic search” to test the functionality.

The system will chunk this document into smaller pieces and create embeddings for semantic search capabilities.
